

## Lab #10(a)

### Lab #10(a) Setup Laravel project (Book Inventory).

| COMMAND USED | ATTRIBUTES USED | DESCRIPTION   |
|--------------|-----------------|---|
| Composer     | --              | In Laravel, Composer is a powerful dependency management tool for PHP that is widely used to manage the libraries, packages, and dependencies your Laravel application relies on. |

### Final Outcome:

---

**Lab #10(a)**

**Code Snippet:**

Open your terminal or command prompt and navigate to the directory where you want to create your Laravel project.

Run the following command to create a new Laravel project named "BookInventory":

Bash:

```
composer create-project --prefer-dist laravel/laravel BookInventory
```

Change into the project directory:

Bash:

```
cd BookInventory
```
